									Electrostatic shield	ES
									Lead terminations	L

**NOTE:** Contact your local Cutler-Hammer sales office for voltage combinations not shown. Use table for catalog number breakdown only.

## Control Transformer Selection Procedure

The following steps will assure that the secondary voltage delivered by your transformer will be either 85%, 90% or 95% of the nameplate secondary voltage under maximum inrush conditions, at rated input voltage. A typical selection example based on these steps follows.

### Step 1

**Calculate the total SEALED (steady state) VA load of your control circuit.** This is done by adding the continuous VA requirements of the maximum number of components that will be energized at any given time, including non-inductive as well as inductive components. For Sealed VA data see **Page 12-6**.

### Step 2

**Calculate the PEAK INRUSH VA of your control circuit.** First, analyze the sequence of operation of all components. Then add together the inrush VA ratings of the components that will be energized simultaneously. Next, determine the peak—or maximum simultaneous—inrush VA load that the transformer will “see.” The VA requirements for indicating lights, timers and other non-inductive components which do not have an inrush VA also should be included since they will present a load to the transformer at the time of maximum inrush.

### Step 3

**Calculate the TRANSFORMER SELECTION INRUSH VA.** Use the following formula:

$$\text{Selection Inrush VA} = \sqrt{(\text{VA Sealed})^2 + (\text{VA Inrush})^2}$$

**NOTE:** Transformer Selection Inrush VA also can be determined by adding the inrush VA and sealed VA arithmetically, but this usually results in an oversized transformer.

### Step 4

**Determine the correct transformer NAMEPLATE VA RATING.** Refer to the Inrush/Regulation Data table: If the line supply to the transformer is fairly stable (does not vary more than 5%), use the 90% secondary voltage column—the 90% column is most commonly used. If the line supply voltage varies up to 10%, use the 95% voltage regulation column. To determine the correct VA transformer rating, go down the column until you arrive at the inrush VA rating closest to, but not less than, the Transformer Selection Inrush VA calculated in Step 3. The left hand column of the table will give the corresponding transformer NAMEPLATE VA RATING.

### Inrush/Regulation Data

Transformer VA Rating 55°C	Inrush VA — 40% Power Factor		
	At 95% Secondary Voltage	At 90% Secondary Voltage	At 85% Secondary Voltage
60	137	185	227
95	242	329	409
105	294	407	512
180	592	842	1071
225	929	1312	1663
275	1271	1801	2288
320	1581	2224	2816
380	2124	3048	3895
550	3196	4604	5896
850	5500	7914	10141
1100	8382	12067	15477
1500	11100	16066	21032
2000	21820	24356	41100
3000	29123	32770	59997
5000	74595	111000	145000
7500	104000	162000	219000
10000	111000	166000	237000

**NOTE:** When evaluating supply-line stability, remember that supply-line voltage drop frequently is associated with motor-starting inrush current. When motors and motor controls are connected to a common feeder, the controls will experience a momentary voltage dip when the motor starts. This reduces the control transformer voltage supplied to the motor starting contactor and may cause the contactor to chatter or drop out.

## Selection Example

### Steps 1 and 2

By following Steps 1 and 2 described in column one at left, analysis of the control circuits shows the following sealed VA and inrush VA data:

Qty.	Description	Sealed VA	Inrush VA
3	3-Pole Size 1 Contactors	60	309
2	3-Pole Size 3 Contactors	99	780
4	Relays	88	620
2	Electronic Timers	36	36
4	Indicating Lights	28	28
		Totals	1773

### Step 3

Following Step 3 in column one at left, the Transformer Selection Inrush VA is calculated at 1773 VA.

### Transformer Selection VA

$$= \sqrt{(\text{VA Sealed})^2 + (\text{VA Inrush})^2}$$

$$= \sqrt{(311)^2 + (1773)^2}$$

$$= \sqrt{3,240,250}$$

$$= 1800$$

### Steps 4 and 5

Following Steps 3 and 4 at left, the Inrush/Regulation Data Chart is then consulted to find the correction nameplate VA size of the transformer. Under the 90% Secondary Voltage column, we find that a 320 VA transformer will deliver 2224 VA, amply covering circuit demands of 1880 Inrush VA. Checking this selection against the requirements of 311 VA sealed, we confirm that a 320 VA transformer will be sufficient.

**When Ordering Specify**

- Catalog Number

**Description**

These control transformer kits provide a convenient on-the-job addition of control transformers to the following NEMA 1, 3R, 4/4X and 12 enclosed starters. Adding or changing these kits does not affect the UL listing in most instances.

**For Non-combination Starters**

These kits may be used for transformer voltage conversion on Freedom NEMA, IEC and Advanced Design NEMA (Advantage) starters furnished from the factory with control transformers installed. Non-combination starters with CPTs factory installed are Class ECN07,

ECA07, ECE07 and ECE11. These kits may also be installed in oversize enclosures that have been designed to accept transformers.

**Combination Starters**

Most combination starters have space for standard size (and 100 VA extra capacity) control power transformers. The panels are pre-drilled for mounting.

*Control Transformer Kit*

**UL/CSA**

UL listed — File Number E10156, Guide XPTQ.

The transformer kit consists of:

- Control transformer
- Two primary and one secondary fuse
- Wires
- Mounting instruction publication

**Standard Transformer Sizes<sup>①</sup>**

NEMA Size	IEC Size	VA Capacity		
		Freedom	Advantage	Vacuum
0	A - F	50	—	—

## Applications

Cutler-Hammer MachineTool and Control Transformers provide stepped-down voltages to machine tool control devices, enabling control circuits to be isolated from all power and lighting circuits.

This allows the use of grounded or ungrounded circuits that are independent of the power or lighting grounds; greater safety is afforded the operator. The control transformer line is particularly adaptable on applications where compact construction is demanded. Electrical performance equals or exceeds ANSI/NEMA standards.

## Type MTA Transformers

- UL recognized component and CSA certified for units rated 1000 VA and below.
- 100% tested to verify product quality.
- Electrical performance equals or exceeds requirements of ANSI/NEMA ST-1.
- Regulation exceeds ANSI/NEMA requirements for all ratings.

## Type MTC

Type MTC Control Transformers are similar to Type MTA except MTC provide increased regulation.

## Features

- Designed specifically for loads requiring extremely good regulation — 10% to 200% better regulation than Type MTA.
- UL recognized component and CSA certified for units rated 1000 VA and below.
- Electrical performance exceeds requirements of ANSI/NEMA ST-1.
- 100% tested; each unit must pass rigid tests for turns ratio, insulation, continuity, and over potential.

### Accessories – Field Installed

Fuse Holders for Types MTA and MTC Control Transformers (Fuses not included)		
Add-a-part fuse holders mount directly on terminal screws of Types MTA and MTC Control Transformers to provide secondary fusing when required without increasing control panel space requirements. Fuse holders are rated 240V AC.		
Transformer	Fuseholder Catalog Number	*

Type AP

**Type AP**

The Type AP Control Transformers feature an encapsulated core and coil which provides a totally enclosed, non-ventilated construction. Smaller than open core and coil type units, connections are made with the convenient screw type terminal board. For ease of installation, two types of mounting are provided. Select a design with the base plate arranged for bottom mounting or for side/wall mounting.

**Features**

- UL recognized.
- Resin encapsulated.
- Convenient screw-type terminal board.
- Bottom or side/wall mounting designs.
- Performance meets/exceeds ANSI/NEMA ST-1 requirements.
- Regulation exceeds ANSI/NEMA requirements for all ratings.
- 115°C winding rise.

**Type AP**

## Features

- Epoxy encapsulated coils.
- UL Listed, CSA Certified.
- Provides step-down voltages to machine tool control devices.
- Isolates control circuits from power and lighting circuits.
- Laminations of high quality silicon steel to minimize core losses and optimize performance.
- Copper magnet wire for high quality, efficient operation.
- Secondary fuse clips where applicable.
- Optional primary fusing.
- Molded-in terminals.
- 55°C rise, Class 105 insulation system.
- 50/60 Hz.

① See Page 9-24 for Wiring Diagrams.

② Type MTG Open Core-Coil Universal Design.

③ Type MTE Epoxy Encapsulated Universal Design.

NOTE: For additional information, refer to Cutler-Hammer Industrial Transformer Binder B1228A.

**Primary Fuse Kit**

The primary fuse kit includes a 2-pole Class CC fuse block, instructions, and all associated mounting and wiring hardware. Fuses are not included. When installed, the primary fuse kit will add a maximum of 11/16 inch to the transformer depth and 1-15/16 inches to the transformer height.

Catalog Number	*
PK1	

\*Prices — Consult Sales Office or Price List

## Features

- Epoxy encapsulated coils.
- UL Listed, CSA Certified.
- Provides step-down voltages to machine tool control devices.
- Isolates control circuits from power and lighting circuits.
- Laminations of high quality silicon steel to minimize core losses and optimize performance.
- Copper magnet wire for high quality, efficient operation.
- Secondary fuse clips where applicable.
- Optional primary fusing.
- Molded-in terminals.
- 55°C rise, Class 105 insulation system.
- Factory mounted dual primary Class CC fusing capability.
- 50/60 Hz.

## Features

- Epoxy resin impregnated coil design.
- UL Listed, CSA Certified.
- 115°C rise, Class 180 insulation system.
- Copper magnet wire for high quality, efficient operation.
- 50/60 Hz.

NOTE: For additional information, refer to Cutler-Hammer Industrial Control Transformer Binder B1228A.

## Features

- Epoxy encapsulated coils.
- UL Listed, CSA Certified.
- Provides step-down voltages to machine tool control devices.
- Isolates control circuits from power and lighting circuits.
- Laminations of high quality silicon steel to minimize core losses and optimize performance.
- Copper magnet wire for high quality, efficient operation.
- Molded-in terminals.
- 55°C rise, Class 105 insulation system.
- 50/60 Hz.
- Non-short circuit proof transformer, isolating type.

① See Pages 9-24 and 9-25 for Wiring Diagrams.

NOTE: Transformers are designed to operate in a maximum ambient of 40°C.

## Finger-Safe Terminal Covers (Optional)

- Fits CE marked designs 50 – 750 VA
- Fits MTE and MTG designs 25 – 750 VA

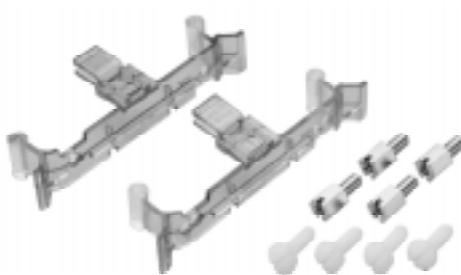

Catalog Number	*
FSK4 (for 4 Terminal Transformers)	
FSK6 (for 6 Terminal Transformers)	

## Finger-Safe Primary Fuse Block Covers

- Fits 2-pole primary fuse blocks on MTE and MTG designs

Catalog Number	*
FSKB	

\*Prices — Consult Sales Office or Price List
